

01 Access, browsing, and registration

02 ADMIN business flow — configure competition and administer results

03 PARTICIPANT business flow — enter, compete, and leave

Legend and source-grounded notes

Green = persisted successful state
Blue = caller action / accessible read
Amber = business decision
Red = rejected operation

Authorization is cumulative: a user may be authorized for multiple roles.
No role hierarchy is inferred: /ADMIN-only and PARTICIPANT-only endpoints require their stated authority.
All GET endpoints are publicly permitted by SecurityConfig; /users/info reads the current SecurityContext, so it is useful when authenticated.

Active means endDate is today or later in UTC.
The previous-win rule: a win in any earlier challenge permits concurrent active registrations.
Leader state is the quickest non-null lap time; clearing/changing the current leader's time triggers recomputation.
